

NEW: 2022 Passive Safety Conference endorsed by:

Sponsored by: 

Passive Safety UK invites you to our 2022 **Passive Safety Conference**. Whether you are very familiar with passive safety design but need updating, or you would just like to learn the basics, this Conference is for you.

In July of this year, a national crash demonstration event took place, during which combinations of passively safe roadside items were impacted, in a series of remote-controlled demonstrations. Film footage and electronic data recording within the vehicles were subsequently analysed to determine if the passive safety performance of the items is affected by their use in this way.

Find out more about what was intended and achieved by the crash demonstrations and how this may be used in future advice and standard updates.

The Passive Safety Standard - EN 12767:2019 does not specifically deal with the testing of these combinations of items and so this is a valuable insight into real world performance of products tested to EN 12767.

The conference will be integrated with a large exhibition of passive products and experts from industry will be on hand to explain how their products work.

Passive Safety UK will also be presenting updated National Guidelines, incorporating advice derived from the results of the crash demonstration day and incorporating the latest comprehensive listing of all available products and their EN 12767 classifications.

This event is endorsed by The Institute of Highway Engineers and the Chartered Institution of Highways & Transportation and a full days CPD credit is available. **Tickets are fully refundable in the event of the introduction of any Covid restrictions which prevent the Conference taking place.**

This Conference is also endorsed by National Highways. *“Passively safe structures play a key role in making the road environment more forgiving. However, it is important that designers are aware of and understand the current standard to allow them to design and specify appropriate products to ensure that the positive safety benefits are achieved. National Highways welcomes initiatives to educate and inform designers and specifiers to improve safety and I am happy to support this conference”.*

Jim Gallagher BSc (Hons) CEng MICE, Principal Structures Advisor Safety, Engineering and Standards Structures Policy, National Highways.

The event takes place on **14th October 2022 at the National Conference Centre – Birmingham** (Near M42 – J6).

Delegate places are £195.00 (No VAT). A 15% discount is available for CIHT and IHE members. Places are limited so please book early to avoid disappointment. Please contact info@passivesafetyuk.com for further information and/or to book a place.
